

LIGHTFORGE WORKS PARTNER DECK

VentureForge turns a messy client problem into a decision-ready report.

A practical talk track for partners: what to say, what to ask for, how the handoff works, and what happens after the report.

Partner-owned relationship

One-week analysis

ForgeWorks front door

Give LFW the data and the problem context. One week later, the client gets the case for what is worth solving.

Keep the first explanation simple enough for a partner to repeat in the next meeting.

PARTNER PROBLEM

A client can feel the operational pain before they can justify a project.

VentureForge gives the partner a concrete next step when the client has symptoms, spreadsheets, system extracts, or a stalled software conversation, but not a quantified case.

Report before scope

Partner trust preserved

Delivery path clarified

The missing artifact

A trusted problem/opportunity report that shows what is worth solving, what it may be worth, and whether ForgeWorks should be the next step.

Aligned to Folio North Star: LFW partner channel growth and delivery scaling.

QUALIFICATION

Bring it up when the client needs numbers, not just instincts.

Use VentureForge when...

The client knows something is wrong but cannot quantify the cost.

A VP, CFO, boss, or board needs a stronger business case.

A deal is stalled because the justification is not sharp enough.

The client is deciding whether to invest in software at all.

Skip it when...

The project is already clearly scoped and well justified.

The client has no operational data or usable process context.

The right next step is already ForgeWorks discovery.

DATA ASK

Ask for what they already have.

The client does not need a perfect package. They need enough for Braydon to confirm the analysis can start.

Working spreadsheets

Anything used to track, reconcile, schedule, approve, or report manually.

Voice memo

A client can literally talk through the friction. The structure can come later.

System extracts

ERP exceptions, scheduling exports, inventory reports, order data, CRM activity.

Problem context

Board decks, process docs, SOPs, flowcharts, or a simple list of what is broken.

Two questions

What do you personally want from this? What does the organization keep struggling with?

OPERATING MODEL

The partner owns the relationship. LFW owns the analysis.

01

Partner introduces

Explain VentureForge in the client conversation and gauge interest.

02

Client sends context

NDA first, then data extracts, spreadsheets, docs, or problem notes.

03

Braydon confirms

The one-week clock starts only once LFW says there is enough to analyze.

04

Partner delivers

LFW produces the report; the partner leads the client walkthrough.

CLIENT ARTIFACT

The deliverable is a report the client can make a decision from.

The report is still evolving. The content matters more than the format: what the data shows, what it is worth, and what should happen next.

VENTUREFORGE REPORT

Problems identified

Ranked by likely impact.

Opportunities quantified

What the gaps cost and what solving them is worth.

ROE frame

Before/after case with baselines where possible.

Honest recommendation

What is worth solving, and what is not a fit.

FAQ

Free does not mean vague. It means the analysis stands on its own.

The client signs an NDA, sends usable context, and gets an independent read. If the report shows a clear case, the next step is obvious. If it does not, the client still learned something useful.

The catch?

There is no purchase obligation. The NDA protects the data before any forward motion.

Who sees the data?

Only the LFW analysis team, under the NDA and for the analysis purpose.

How long?

One week from LFW confirming there is enough to work with.

AFTER THE REPORT

When the case is compelling, VentureForge hands off to ForgeWorks.

01

Four discovery sessions

The partner stays in the room and the client context stays intact.

02

Mockups before contract

The client sees the first useful shape before committing.

03

30 days to software

The work moves from report to working application without reopening the whole question.

04

Fixed monthly scope

The source frames ForgeWorks as fixed scope and fixed price at \$2,500/month.

PARTNER ACTION

Pick one client and run the first VentureForge report.

The next decision is not a broad platform launch. It is a specific client, a specific data ask, and a clear owner for the follow-up conversation.

Source-backed deck with Amrish-style constraints: practical, customer-first, artifact-led.

1

Partner names a client with unquantified operational pain.

2

Partner makes the data/context ask and gets the NDA path moving.

3

LFW confirms enough input and starts the one-week analysis clock.

GROUNDING

Keep the story practical, sourced, and easy to repeat.

Start from the customer's practical world, name the value they need to see, and turn the conversation into an artifact or next decision.

Known

The guide defines the offer, ask, handoff, FAQ, report, and ForgeWorks bridge.

Inferred

The deck frames those pieces as a partner operating model.

Validate

Whether partners need a client-facing report sample next.

Avoid

Generic AI language, overclaiming, or bait-and-switch framing.

VentureForge adds a front door: one client, one data ask, one decision-ready report.

Use it when the client needs evidence before scope.
